

WEEK 2

DUE: BEFORE SATURDAY WEEK 3

Light It Up

Add a second game mode. Cards appear — one lights up.
Tap it before it goes dark. The grid grows. The window shrinks.

Goals

01

Home Screen

Add a `NavigationStack` with a proper home screen offering two game mode buttons.

02

Whack-a-Mole Mechanic

Cards appear in a grid — one lights up briefly. Tap it before it goes dark.

03

Level Progression

More cards, faster intervals as the 60-second round progresses (L1 → L4).

04

Persist High Scores

Use `@AppStorage` with a separate key per mode so scores survive app restarts.

05

Reuse Week 1 Code

Don't start over — wrap Tap Frenzy in the new nav shell and add the new mode.

Level Progression

All levels play out inside a single 60-second round — difficulty ramps automatically.

L1	L2	L3	L4
0 – 15 s	15 – 30 s	30 – 45 s	45 s – end
3 cards (row)	4 cards	6 cards (2 × 3)	9 cards (3 × 3)
1.5 s lit window	1.2 s lit window	1.0 s lit window	0.8 s · 2 cards lit

How to Approach It

1

Home Screen

Add `NavigationStack`. Two large buttons — Tap Frenzy & Light It Up.
Each pushes the relevant game view onto the stack.

3

Render the Grid

Use `LazyVGrid` with `GridItem`. Lit cards get bright background + scale-up animation. Dim cards stay neutral.

5

Handle Taps

On tap: check `isLit`. Correct → score up. Wrong → penalty.
Use `withAnimation` for visual feedback.

2

Model the Card

Create a `Card` struct with `id` and `isLit` bool.
Make it identifiable for use with `ForEach` in `@State` array.

4

Light Up on Tick

`Timer.publish` ticks at the current lit-window interval.
Each tick: randomly pick 1 (or 2 at L4) cards to flip lit → dim.

6

Level Progression

Level enum with L1–L4 cases. Each has grid size + lit-window duration. Switch level as the round timer advances.

7

Persist High Score

`@AppStorage` with a unique key per mode. On round end, compare final score to stored best and update if higher.

Submission Checklist

DUE BEFORE SATURDAY WEEK 3 — GitHub commits must show clear progression

Home screen with two mode buttons working

Distinct glow colour per level

Light It Up runs — cards appear, light up, and respond to taps

3 lives system instead of score penalty

Correct tap scores. Wrong or missed taps apply a penalty

Level-up flash overlay

At least 3 levels of progression working inside one round

Settings sheet for round length (30s / 60s / 90s)

High score persists per mode across app restarts (@AppStorage)
